4	<p>Updates on current tasks</p> <ul style="list-style-type: none"> • anushree - finished user class, finished blazer ui (done with her part) - she's doing the login, trouble pushing to GitHub, they've run the code and it is working - issues with code because of mac. By next meeting everything will be ready. They did not account for cross compatibility - leader asked to push to repos just to see if there is an issue with cross compatibility. • leader advised to write down any issues encountered to help for the report • leader told devs to push code as a zip file - on his side everyone has collaborator access however, some of the commits are missing on his end despite the devs pushing it • talking about time complexity - how to make the program work faster and reduce any long waiting time • Mohamed - not encountering any issues so far. fixed the code where mohesh identified the error (foreign key) • he put the foreign key directly • he will push the code after testing 	ALL
	<p>Task Allocation</p> <ul style="list-style-type: none"> • continue with previous tasks 	ME

4	<p>Updates on current tasks</p> <ul style="list-style-type: none"> • Mohamed - updated transaction class code then will push to GitHub. To make sure he pulled Anushree's latest code to move forward. Anushree pushed on Master instead of branch1. Mika advised to use master branch since some issues with branches • Mohesh - code is fine but some issues on his end (extensions) is causing the code to not run. He changed laptop and hasn't downloaded all packages/descrepancies. He will check on his end but code seems fine. Mika uploaded a document containing all the packages that everyone should be using. • Mika: Tasks updates with everyone. Advising devs to include the necessary packages they used in the README file so that lecturer can run the code successfully. Still needs to push the logic for feeding data into database. Will test everything during the weekend and merge the codes then push everything. • Anushree: having slight git issue. Showing what she has so far. Using assembly razor. Implementing UI in client class, admin and logging. She's using bootstraps for frontend. Running code to show the issue she's encountering. Loading screen done but is timing out because of the sound but without the sound it works fine. She hasn't pushed the code completely because she's still figuring out the issue that the sound implementation is causing. • Mika advised to test for logging screen and add Mo's part to see if everything works altogether. • She created a web-assembly app to be able to do the UI • Kim - clarified something with the devs 	ALL
	<p>Task Allocation</p> <ul style="list-style-type: none"> • continue with previous tasks 	ME

4	<p>Updates on current tasks</p> <ul style="list-style-type: none"> • Mohamed – showed transaction class logic and where hash tables logic was added. • Mika - made an edit to database design. Asking how the frontend of the catalog will look like. • asked if anushree corrected the issue for password hash. Showed how the database works now (yay) with the correct and expected results. • anushree - explained login and registration, how the backend handles data. Mika tried to guide her towards a better/maintainable code. They will tackle that part together • Kim - helped mohesh • Mohesh - testing and recording results 	ALL
	<p>Task Allocation</p> <ul style="list-style-type: none"> • Mika and the devs - to wrap everything up code side • Devs - handle the registration for admin and client (how we differentiate) • Mohesh - testing • Kim - complete report 	ME
